

NORM – Next generation Open real-time Smart Meter

Support for Smart Grid

Support for dynamic energy markets

Support for Power Quality

Support for production and storage control

Support for Energy services

Support for security and privacy

(services of the future)

Nobel Grid
Smart energy
for people

success

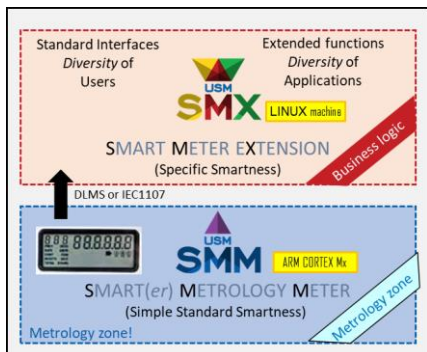

securing critical
energy infrastructures

SUCCESS → Next generation Open real-time Smart Meter

Targeting new functionalities:

- Serving **Active** distribution networks, microgrids, high RES
- Implementing **SUCCESS Security Solutions**, facing cyber attacks

Open source part →

Synchro

NORM

SMM

SMX

SMG

Smart
meter
Gateway

PMU

PUF technology

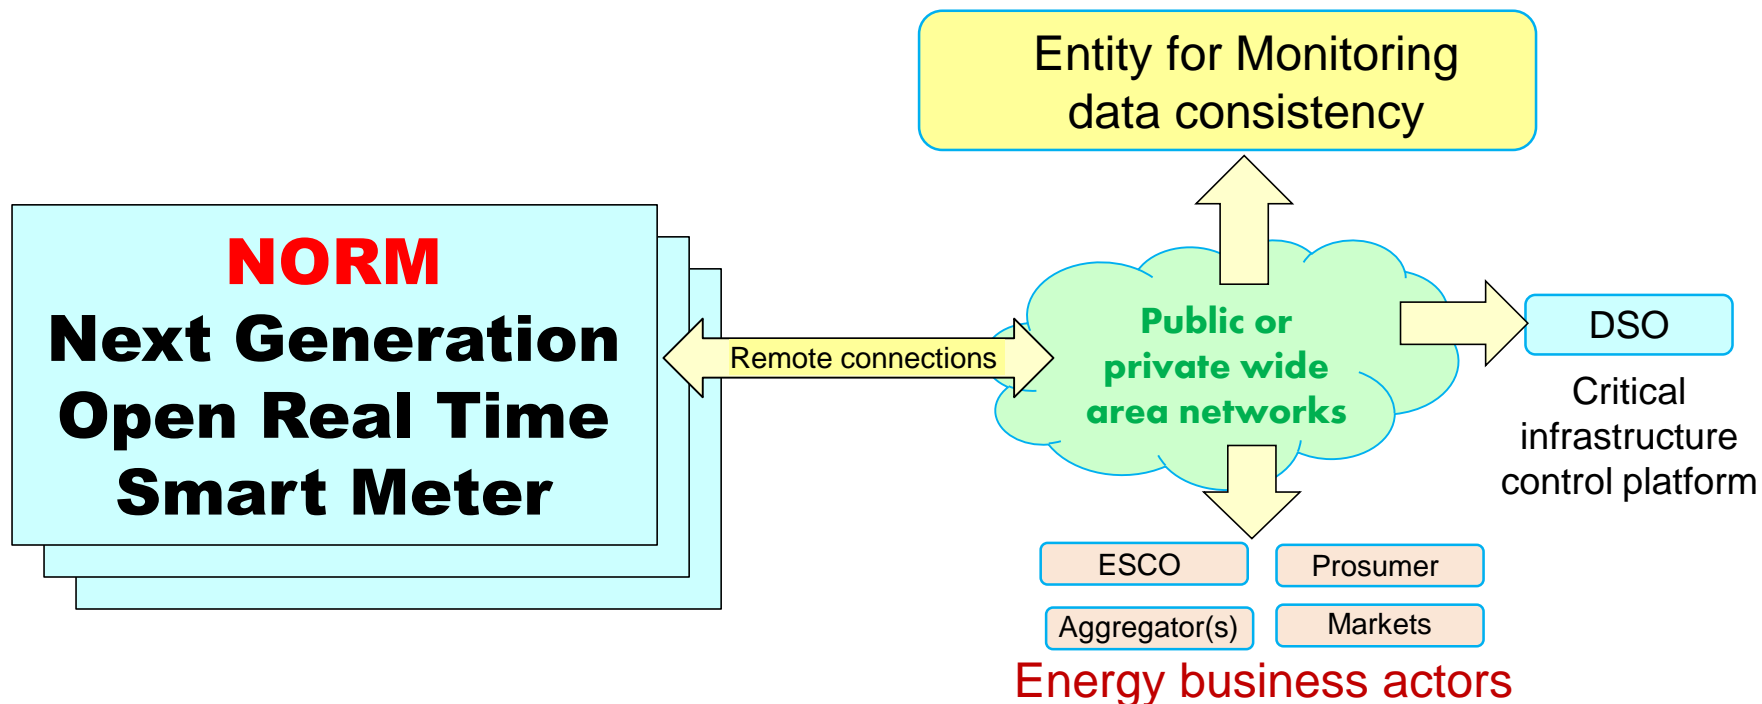

High data
security

success

securing critical
energy infrastructures

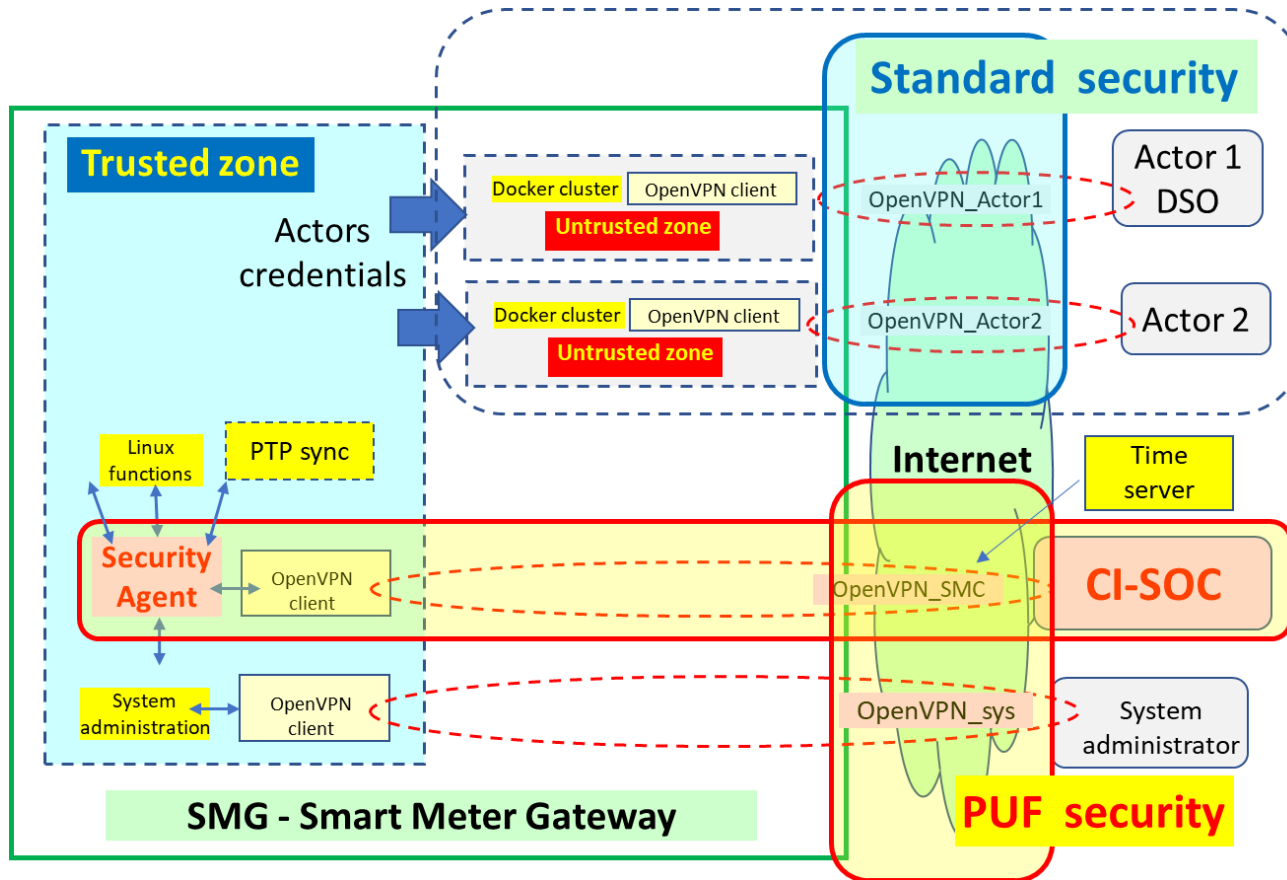

Benefits: Increase Smart Grid cyber-security ← **killing factors**
Multi-actor, ease renewables penetration, keep privacy

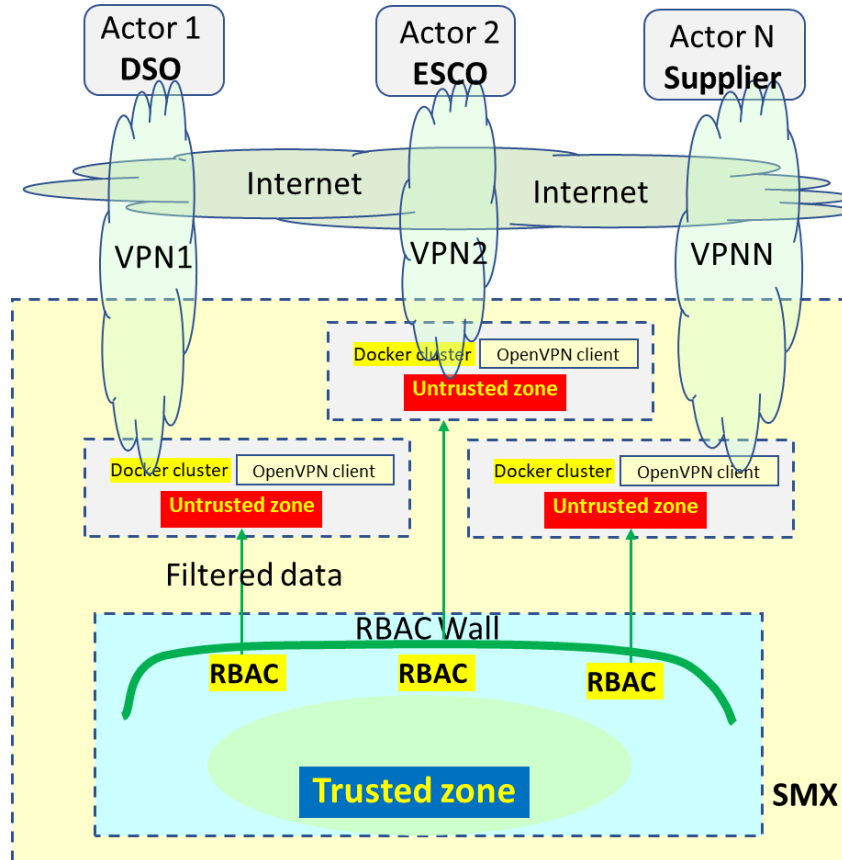

success

securing critical
energy infrastructures

NORM

Design
related to
cyber-
security

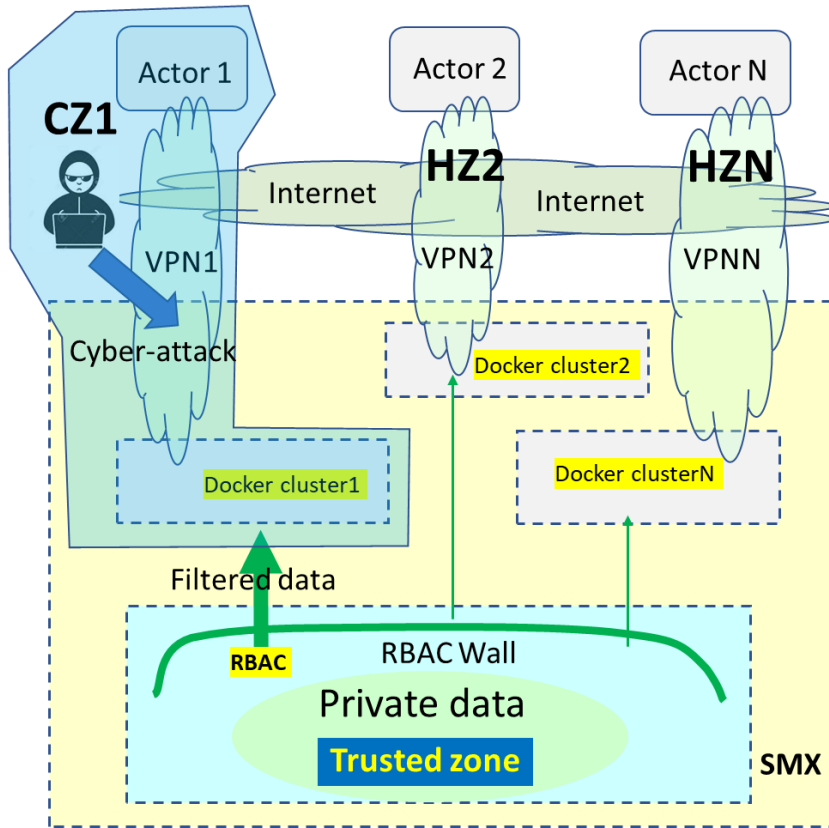

NORM

RBAC

Design related to cyber- security and Privacy

Role-Based Access Control (RBAC)

**Compromised zone is
limited to actor 1
No access to core
(trusted) zone**

**Privacy is compromised
only related to Actor 1
data exchange**

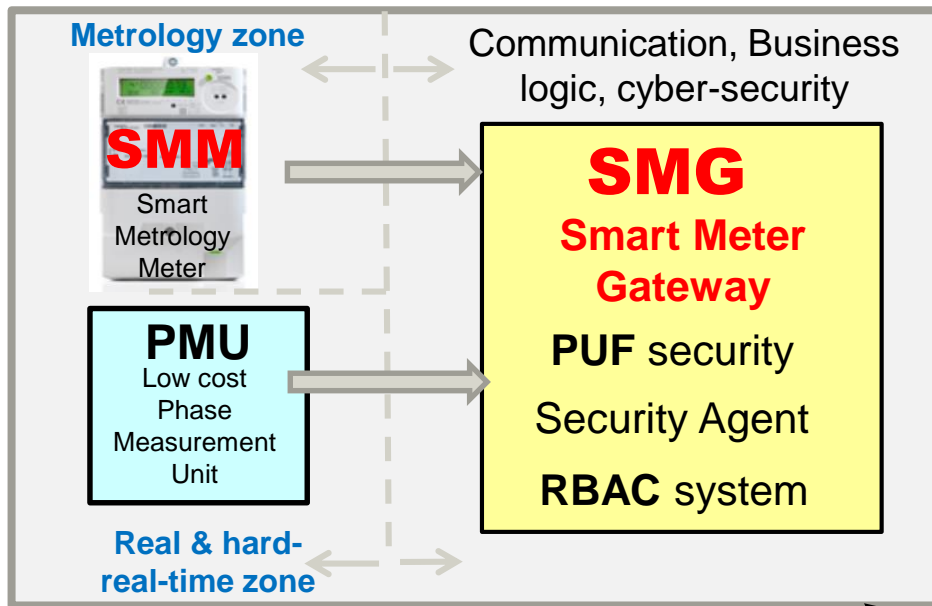

Limited damage

Role-Based Access Control (RBAC)

success

securing critical
energy infrastructures

NORM (Next Generation Open Real Time Smart Meter)

NORM

Detecting tampering at device level

Physical intrusion
detection (switch)

Data security assessment on each level, using frequency as real-time “marker”

Checking consistency at each grid level to detect abnormalities:

Abnormalities at **NORM** level: {
Frequency from meter (each 1 second)
Frequency from PMU (each 1 second)

Abnormalities at local grid level: {
Grid frequency from **NORM**_1
.....
Grid frequency from NORM_n

Abnormalities at national
and Pan-European level: {
Frequencies from regional/national grid 1
.....
Frequencies from regional/national grid n

success

securing critical
energy infrastructures

Normal data measurement (without abnormalities) at different levels:

Detecting possible abnormalities
Comparing frequency measurements
at different scales at local (NORM),
national and **Pan-European** level:

Frequency measurements

3349 3457 3565 3673 3781 3889 3997 4105 4213 4321 4429 4537 4645 4753 4861 4969 5077 5185 5293 5401 5509 5617 5725 5833 5941
D03/f

Measurements:

- **PV in Romania**
- **Hydroplant in Romania**
- **MV distribution in Terni / Italy**

Measurements with abnormalities at grid level:

Patterns in grid measurements to detect suspicious data

Region 2

MV1

MV2

Region 1

NORM-PMU frequencies: local versus national

Recap.

Different security related measures are applied to NORM:

Data integrity check: Performed inside NORM

Detecting tampering at NORM device level

Role-based Access Control (privacy, limited damage)

Security Agent and CI-SOC recognizing bad traffic

High level encryption: PUF technologies

Mihai Sănduleac
Romanian Energy Center
